

Pmod RPi Camera: Raspberry Pi camera (15-pin FFC, 2-lane MIPI CSI-2) on one Pmod.

Soft D-PHY receiver: FPGA LVDS inputs with on-chip 100R termination, no LP receivers (eda/csi_capture, rtl/csi2). Lanes are DC coupled: no series R, no AC coupling, no bias.

CSI pairs: 100 ohm differential, routed on F.Cu over solid B.Cu ground, no vias.

J2: bottom-contact 1-84952-5. If the cable turns out reversed (F1 trips: 3V3 meets camera GND), fit the top-contact 1-84953-5 instead (same footprint) and insert the cable the other way up.

CAM_GPIO (camera power enable) pulled up: the camera powers with the Pmod. CAM_CLK not used.

Raspberry Pi Camera v2 (IMX219) and other 15-pin 2-lane CSI-2 cameras

fpga_samples / eda/csi_capture
